Executive Summary

RigaCap isn't just a trading signal service — it's a **self-marketing machine**. Every trade the system executes becomes a piece of social proof. Every market regime shift becomes thought leadership content. Every competitor's stock mention becomes an engagement opportunity.

The **Social Intelligence Engine** is a fully autonomous content pipeline that transforms real, walk-forward-verified trade results into platform-optimized social content across Twitter/X, Instagram, and Threads. It generates, schedules, notifies, and publishes — with human approval as the only manual step.

This document covers the complete marketing technology stack, target audience research, platform strategy, paid acquisition plan, and growth roadmap.

The Flywheel: Real trades generate content → content builds credibility → credibility drives trials → subscribers generate revenue → revenue funds more content. The engine gets stronger with every trade.

The Product We're Marketing

Before diving into growth strategy, here's what makes RigaCap's product genuinely differentiated — these are the proof points every piece of marketing content should reinforce.

8.3%

ANNUALIZED (21-YR BACKTEST)

19%

WORST
DRAWDOWN (VS
55% S&P)

-0.5%

2008 (S&P:
-37.7%)

+32%

LAST 24 MO,
ANNUALIZED
(HELD-OUT)

3-Factor Ensemble

Breakout timing + momentum ranking + breakout proximity. Three independent signals must agree before entry, across up to 20 inverse-volatility-sized positions.

Market Regime Filter

When the market trend breaks, the portfolio goes to cash — the discipline behind -0.5% in 2008 and -7.5% in 2022 while the index fell -37.7% and -19.9% .

Walk-Forward Backtested

Every return is from walk-forward backtesting — the system traded forward into unseen data across 21 continuous years. Zero hindsight bias, always labeled as backtested.

Signal Persistence

Every signal is persisted to database with full audit trail — when it fired, its scores, and whether it was later invalidated. Provable track record.

Target Audience

Our ideal subscriber is a self-directed retail investor with enough capital and sophistication to value systematic signals, but not so institutional that they'd build their own. Here are the two primary personas.

The Active Self-Director

Male, 30-42 • Income \$85K-\$150K • Schwab/Fidelity

Manages his own brokerage account. Follows FinTwit. Has tried free newsletters but wants something more systematic. Values transparency — wants to see the track record before paying. Will pay \$39/mo for a real edge.

The App-First Optimizer

Male/Female, 26-35 • Income \$75K-\$120K • Robinhood/IBKR

Tech-savvy, open to AI-assisted investing (41% of Gen Z/Millennials). Mobile-first — 75% of retail trades are via apps. Discovers tools through social media. Wants signals delivered to their phone, not a Bloomberg terminal.

Audience by the Numbers

ATTRIBUTE	DETAIL	SOURCE
Core age range	28–45 (avg new investor: 30-35, avg trader: 43)	BestBrokers 2026
Gender split	~85% male (active stock traders)	BestBrokers 2026
Income threshold	\$75K+ household (enough to invest AND subscribe)	CoinLaw 2026
Retail inflows (2025)	\$302B into US stocks (+53% YoY)	CoinLaw 2026
Gen Z + Millennial share	60%+ of retail trading activity	WEF 2025

ATTRIBUTE	DETAIL	SOURCE
Social media as input	50% of retail investors use social for investment decisions	CoinLaw 2026
AI openness	41% of Gen Z/Millennials would let AI manage investments	WEF 2025
Mobile trading	75% of retail trades are executed via mobile apps	CoinLaw 2026

Platform Strategy

Our platform selection is driven by one question: *where do self-directed investors with disposable income spend their attention?* Not all social platforms are equal for fintech subscription conversion.

Tier 1: Primary Channels (Organic + Paid)

Twitter / X

Our #1 channel. 70% of users are under 35. 61% male. 29% earn \$100K+. FinTwit is the largest organic investing community — real-time format is perfect for "we called it" proof posts and contextual replies.

Instagram

Brand credibility + discovery. 81% Millennial usage. 1.69B ad reach. Visual format for polished trade cards, carousel education, and Reels for algorithmic discovery beyond our followers.

Tier 2: Emerging Channels (Organic Only)

HIGH POTENTIAL

YouTube

#1 for Gen Z (91%) and Millennials (90%). Finance YouTube builds deep trust. Start Month 2-3.

CROSS-POST

Threads

25-34 dominant. Auto cross-post from X. Zero incremental effort. Re-evaluate when ads launch.

CREDIBILITY

Reddit

r/stocks, r/investing. Organic credibility play only. Genuine participation, never self-promo.

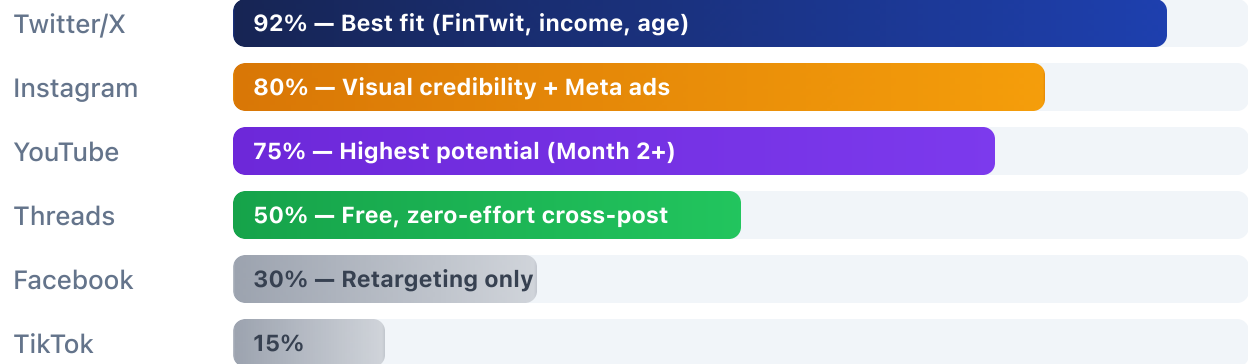

Why Not Facebook or TikTok?

Facebook — Demographics actually overlap (25-34 is 31%), but investing culture is weak. Use only for Meta pixel retargeting alongside Instagram ads.

TikTok — Skews 18-24. Great for awareness, terrible for converting paid subscribers. Users have less capital.

Consider only for free cross-posting of
YouTube Shorts.

Platform Demographic Fit

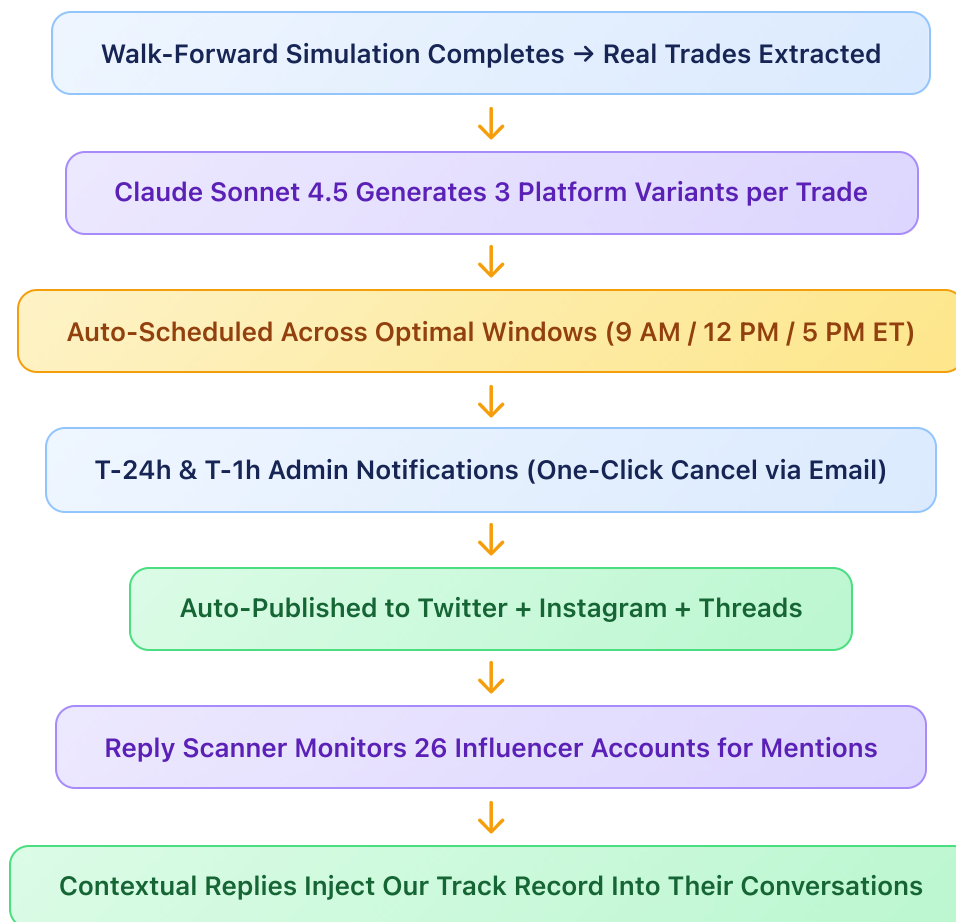

The Social Intelligence Engine

CORE ASSET

This is not a social media scheduler. It's an **autonomous growth machine** that turns every trade the system makes into discoverable, provable, platform-optimized social proof — and then injects that proof into the exact conversations where potential subscribers are already paying attention.

How It Works

Key Insight: The highest-leverage social activity isn't posting — it's replying. When @unusual_whales (500K followers) mentions a stock we've already traded, our system automatically generates a contextual reply with our verified results and sends it for one-click admin approval. We use *their* audience, *their* context, and *our* real track record.

AI Content Generation

Claude Sonnet 4.5

Not ChatGPT. Anthropic's Claude produces witty, confident, data-driven copy that reads like a sharp human, not a bot. Platform-specific character limits enforced (260 Twitter, 500 Threads, 600+ Instagram).

3 Post Types

Trade Result: Celebrate verified wins.

Missed Opportunity: FOMO/education angle. **"We Called It":** News-driven social proof linking our signal to a recent catalyst.

100+ Template Variations

48 win openers, 51 miss openers, 7 regime flavor pools. Deterministic selection (same trade = same template) ensures consistency with zero repetition across different trades.

News Enrichment

Automatic headline fetching via market data APIs. "We Called It" posts connect our signal timing to real-world catalysts — the most shareable content type.

Contextual Reply System

GROWTH ENGINE

The reply system is our highest-ROI social feature. Rather than broadcasting into the void, we insert ourselves into existing conversations where investors are already engaged — with proof, not promotion.

26 Monitored Accounts Across 5 Categories

CATEGORY	EXAMPLE ACCOUNTS	WHY
FinTwit / Quant (7)	@unusual_whales, @PeterLBrandt, @QuantConnect	500K+ followers in our exact target demo
Fintech Companies (7)	@TradingView, @TrendSpider, @AlpacaHQ	Their users are our subscribers
Financial Media (4)	@morganhousel, @ritholtz, @KateRooney	Thought leadership credibility
Trading Educators (5)	@markminervini, @LindaRaschke, @UmarAshraf	Engaged audiences, momentum/systematic overlap
Partners (3)	@Quantpedia, @QuantStart, @TradersPost	Potential integration partners

Three-Tier Symbol Extraction

When a monitored account tweets, the system extracts stock mentions using three layers of progressively looser matching:

Tier 1: Cashtags (\$NVDA)

Always trusted. Unambiguous stock mention. Highest confidence match.

Tier 2: Bare Tickers (MSFT)

Only matched when financial context is detected in the surrounding text. Prevents false positives.

Tier 3: Company Names

Word-boundary match ("nvidia" → NVDA). Most aggressive, but catches casual mentions that cashtags miss.

Trade Matching

Matched symbols checked against real model portfolio exits (primary) and walk-forward sim trades (fallback). Min 5% return. Best match selected.

Example Flow

@TastyTrade posts: "NVDA breaking out of consolidation, watching for entry"

RigaCap reply (auto-generated): "Our ensemble flagged NVDA on Jan 15 when all three factors aligned. It's up 12% since. Full breakdown: rigacap.com/track-record"

Admin receives one-click approve/skip email. Approved replies publish instantly via Twitter API v2.

Instagram Comment Automation

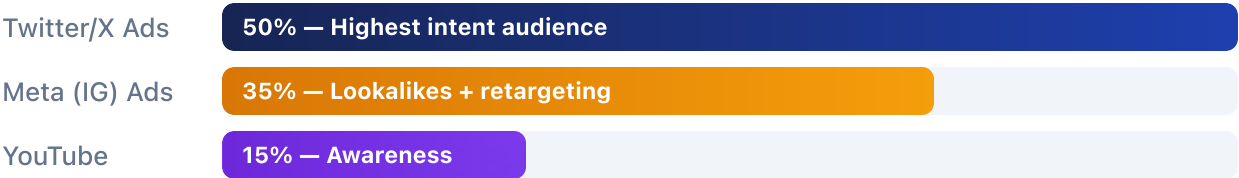

The engine also monitors comments on our own Instagram posts and generates warm, on-brand replies via Claude. Not salesy — genuine engagement that builds community. Comments under 10 characters are filtered, dedup prevents double-replies, and all responses go through admin approval.

Spam Prevention & Brand Safety

- **7-day dedup:** Never reply twice to the same account/symbol combination within a week
- **Prompt guardrails:** "Never give financial advice," "Never start with 'Great post!'," "No hashtags in replies"
- **Admin approval required:** Every reply goes through human review before publishing
- **Rate limiting:** Max reply scan 4x daily to avoid API limits and appearing bot-like

Paid Acquisition Strategy

Budget Allocation

Targeting Strategy by Platform

PLATFORM	PRIMARY TARGETING	CREATIVE ANGLE
Twitter/X	Followers of @unusual_whales, @TrendSpider, @StockTwits. Interests: stock trading, momentum trading. Keywords: "trading signals"	Proof-first: real trade results with track record link
Instagram	Lookalike from subscriber email list. Interests: investing, financial technology. Behaviors: brokerage app users	Visual trade cards, carousel education, regime insights
YouTube	Finance channel viewers, "stock trading signals" search intent, competitor channel audiences	Signal recap videos, "how the ensemble works" explainers

Ad Creative Themes

Social Proof

"Our system flagged [STOCK] before it ran +X%. See the full track record." — Highest conversion angle. Links to /track-record.

Risk Management

"-0.5% in 2008 while the market lost 37.7%. A 19% worst drawdown across 21 backtested years — the index lost half its value twice." — Appeals to the risk-conscious investor.

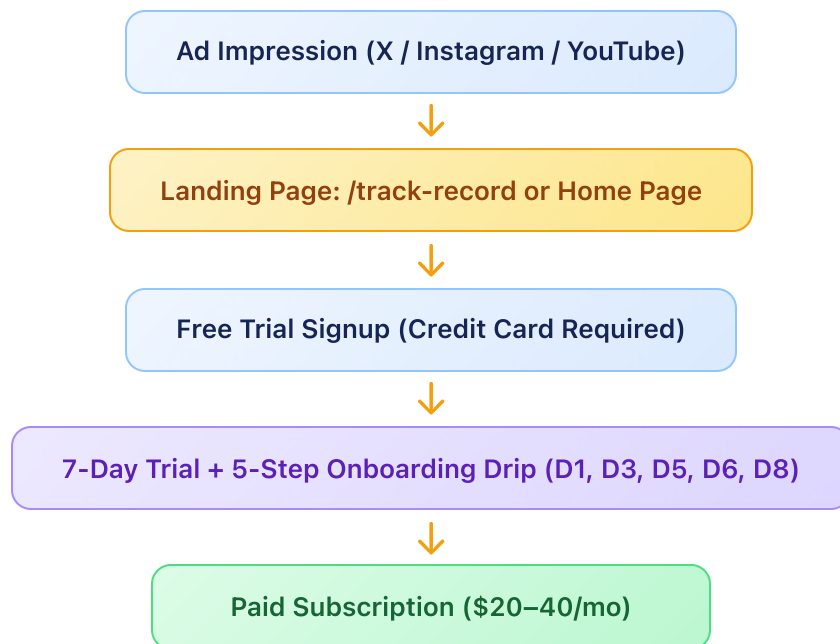

AI / Tech Credibility

"3-factor ensemble + a market-regime filter that goes to cash. Not another stock tips newsletter." — Differentiates from the noise.

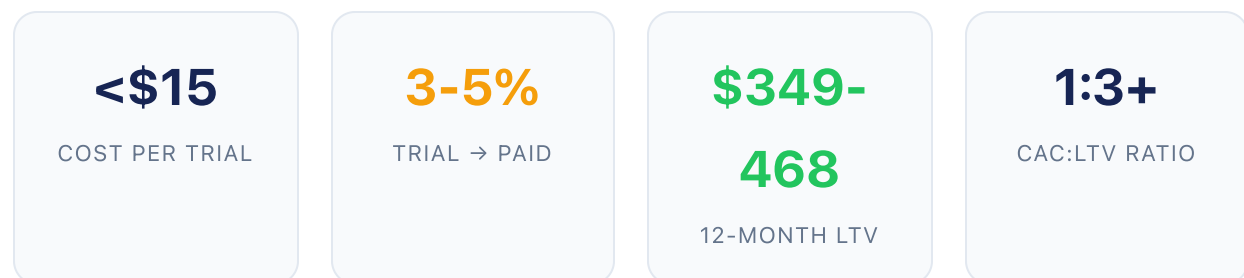

FOMO / Urgency

"Today's fresh signals are live. Start your free trial." — Direct response for bottom-of-funnel.

Conversion Funnel

Unit Economics Targets

Publishing Infrastructure

The engine handles the entire lifecycle from content generation through platform-specific publishing, with admin approval as the human-in-the-loop safety layer.

Optimal Posting Schedule

WINDOW	WEEKDAY	WEEKEND	RATIONALE
Morning	9:00 AM ET	10:00 AM ET	Pre-market attention, morning commute scroll
Midday	12:00 PM ET	2:00 PM ET	Lunch break engagement peak
Evening	5:00 PM ET	—	Post-market recap, evening browsing

Posts are spread 1-3 days out from generation. Maximum 4 posts per day to avoid audience fatigue.

Admin Approval Pipeline

T-24h Notification

Full post preview delivered to admin email. One-click JWT-signed cancel link. 48-hour token expiry gives buffer for late cancellations.

T-1h Final Warning

Last-chance review 30-90 minutes before publish. Catches any market events that would make the post tone-deaf.

Auto-Publish

Every 15 minutes, the engine publishes any posts where `scheduled_for ≤ now` and status is `approved/scheduled`. Completely hands-off.

Full Audit Trail

Every post records: AI model used, prompt hash, approval timestamp, platform response, posted URL. Complete accountability.

Multi-Platform Publishing

PLATFORM	PROTOCOL	FEATURES
Twitter/X	OAuth 1.0a + API v2	Post, reply, media upload, user lookup, follow
Instagram	Graph API v24	Post with image, comment reply, container status polling
Threads	Threads API v1	Post, reply, media upload, weekly token refresh

Automated Cron Jobs

JOB	FREQUENCY	ACTION
Auto-publish	Every 15 min	Publish posts where scheduled_for ≤ now
Notifications	Every hour	Send T-24h and T-1h admin approval emails
Reply scanner (X + Threads)	4x daily	Scan 26 accounts, match trades, generate replies
Instagram comment scanner	4x daily	Monitor our posts, generate warm replies
Threads token refresh	Weekly (Mon 3 AM)	Prevent 60-day token expiry

Growth Roadmap

Phase 1: Foundation (Week 1)

- **Brand Introduction Posts**

1-2 posts establishing who RigaCap is. Walk-forward performance teaser. Link to /track-record.

- **Follow & Engage Target Accounts**

Follow 26 target accounts. Like, retweet, engage manually. Get on their radar before any promotional content.

- **SEO Baseline**

robots.txt, sitemap.xml, structured data (JSON-LD), canonical URLs, GA4 analytics — all deployed.

Phase 2: "We Called It" Activation (Week 2-3)

- **AI Content Engine Goes Live**

Start publishing AI-generated trade result posts from real walk-forward data. 2-3 posts/week through admin approval pipeline.

- **Regime Intelligence Content**

"The market just shifted from weak_bull to rotating_bull. Here's what that means for stock selection." Post regime shifts as they happen.

- **Content Mix**

60% trade results + 20% missed opportunities + 20% regime calls. Tuned for engagement.

Phase 3: Contextual Reply Strategy (Week 3-4)

- **Reply Scanner Activated**

Automatic scanning of 26 followed accounts. Claude generates contextual replies linking our verified results.

- **Instagram Comment Engagement**

Warm, human-sounding replies to followers. Builds community and improves algorithmic distribution.

Phase 4: Growth Engine (Month 2+)

- **Paid Ads Launch**

Twitter + Meta ads with proof-first creative. Target CAC <\$15 per trial signup.

- **YouTube Shorts**

60-second "signal recap" videos. Test format before committing to long-form. Finance YouTube is massive for trust-building.

- **Referral Program Amplification**

"Give a month, get a month." Unique 8-char codes, Stripe coupon at checkout, referrer rewarded on trial → paid conversion.

- **Blog / SEO Content**

Long-form posts: "How our ensemble detected the sector rotation." Target keywords: trading signals, momentum trading, market regime.

Retention & Subscriber Experience

Acquisition is expensive. Retention is where the compounding happens. RigaCap's product is built with retention mechanics at every layer.

Built-In Retention Features

5-Step Onboarding Drip

Automated email sequence over 8 days: how signals work (D1), pro tips (D3), trial ending (D5), last day (D6), win-back with 20% off (D8).

Daily Signal Emails (6 PM ET)

Persisted ensemble signals from the 4 PM scan. Dashboard and email always show the same signals — no inconsistency.

Real-Time Sell Alerts

Intraday monitoring every 5 minutes. Trailing stop triggers, regime shift exits, and proximity warnings delivered instantly.

"Your RigaCap Journey"

Personalized what-if calculator from signup date vs SPY. Shows subscribers exactly what they would have earned — shareable results.

Deep Intelligence Suite

AI Trade Autopsies

Claude-generated post-mortem on every closed position. What worked, what didn't, lessons for the next trade.

Ghost Portfolios

3 parallel universes: "What if we held longer?" "What if we used tighter stops?" "What if we sized differently?"

Regime Forecast Dashboard

Bayesian transition probabilities displayed as a forecast. Shows where the market is likely heading — not just where it's been.

Referral Program

"Give a month, get a month." Unique codes, Stripe coupon integration, automatic reward on trial conversion. Built into welcome email + dashboard modal.

Email Infrastructure

EMAIL TYPE	TRIGGER	PURPOSE
Welcome	Signup	Onboarding, referral code, quick start
Daily Digest	6 PM ET (trading days)	Today's signals + regime + watchlist
Sell Alert	Intraday (real-time)	Trailing stop / regime exit triggered
Double Signal Alert	5 PM ET	New momentum + breakout crossover
Intraday Crossover	During market hours	Watchlist stock just crossed breakout trigger
Onboarding Drip (5)	D1, D3, D5, D6, D8	Education → urgency → win-back
Post Approval	T-24h / T-1h	Social post preview + cancel link

All emails include SPF + DKIM + DMARC authentication, List-Unsubscribe headers (RFC 8058), and per-category opt-out controls.

KPIs & Measurement Framework

Growth Metrics

METRIC	TARGET	MEASUREMENT
Landing page → trial signup	3-5%	GA4 conversion events
Trial → paid conversion	3-5%	Stripe webhooks
Monthly churn rate	<5%	Stripe subscription events
Cost per trial (paid ads)	<\$15	Platform ad dashboards
CAC:LTV ratio	1:3+	Stripe LTV / ad spend
ROAS breakeven	Month 3-4	Cohort analysis

Social Engagement Metrics

METRIC	TARGET	NOTES
Impressions per week	10K+	Combined across X + IG + Threads
Engagement rate	>2%	Likes + replies + retweets / impressions
"We Called It" click-through	>1%	UTM tracking to /track-record
Contextual reply → profile visit	Track baseline	Twitter Analytics (new metric)
AI vs template content performance	A/B test	Compare engagement by ai_generated flag
Email-to-post latency	<48h	Nightly WF → published post

Content Pipeline Metrics

2-3

AI POSTS / WEEK

3-5

REPLIES / SCAN

>70%

ADMIN APPROVAL
RATE

<48h

TRADE → POST

Quarterly Review Checklist

- Refresh demographic data (audience sources update annually)
- Review ad performance by platform: CPT, conversion rate, ROAS
- Evaluate new platforms (Threads ads? Reddit ads? Bluesky?)
- Update audience profile based on actual subscriber demographics
- Adjust budget allocation based on what's converting
- Review competitor social presence and positioning changes
- A/B test: AI-generated vs template content engagement
- Analyze referral program performance and adjust incentives

RigaCap — Marketing & Growth Playbook — April 2026

Confidential. For internal use only. All performance figures are from walk-forward validation with zero hindsight bias.

RigaCap provides trading signals only. Users execute trades via their own brokerage accounts. Past performance does not guarantee future results.
