Executive Summary

RigaCap is a **fully autonomous, AI-driven equity trading platform** that identifies high-conviction momentum breakouts across 4,000+ US stocks. A market-regime filter automatically moves the portfolio to cash when conditions are unfavorable — a discipline that limited 2022 to -7.5% while the S&P 500 fell -19.9% , and held 2008 to -0.5% while the index lost -37.7% .

The production **RigaCap Momentum Strategy** — combining breakout timing, momentum quality ranking, and disciplined risk controls — has been validated through a continuous 21-year walk-forward backtest (2007–2026, price returns) with **zero hindsight bias**: 8.3% annualized, 0.73 Sharpe, 0.43 Calmar, and a worst drawdown of 19% through the 2008 financial crisis, COVID, and the 2022 bear. Over the held-out last 24 months (Jun 2024–May 2026) it returned $+32.0\%$ annualized (2.20 Sharpe, 8.5% max drawdown) versus $+19.9\%$ for the S&P 500.

In April 2026, RigaCap launched its **Social Intelligence Engine** — an autonomous growth flywheel that transforms real trade results into social content, distributes that proof into active market conversations, and builds community through intelligent engagement across Twitter/X, Instagram, Threads, and TikTok.

Key Differentiator: Every return figure cited in this document is from walk-forward backtesting — the system was tested on data it had never seen during optimization. Data from 2016 onward is survivorship-free and point-in-time; the pre-2016 extension carries a survivorship caveat. The live track record began June 11, 2026 with a fresh \$100k model book — all figures before that date are backtested.

Walk-Forward Performance (2007–2026, Backtested)

A continuous 21-year walk-forward backtest on price returns. The edge is not raw return — it is surviving every crisis fully intact. The S&P 500 lost more than half its value twice in this window; RigaCap's worst drawdown was 19%.

STRATEGY (2007–2026)	ANNUALIZED	SHARPE	WORST DRAWDOWN
RigaCap Momentum Strategy	8.3%	0.73	19%
Raw 12-month momentum (net of costs)	13.2%	0.69	57%
S&P 500 (price only)	9.8%	0.54	55%

Crisis-Year Performance

YEAR	RIGACAP	S&P 500	CONTEXT
2008	-0.5%	-37.7%	Financial crisis — regime filter held the portfolio in cash
2020	+31.9%	+15.2%	COVID crash and recovery
2022	-7.5%	-19.9%	Rate-hike bear market
2018	-12.3%	-7.0%	Honest wart: whipsaw year where the filter underperformed

Held-Out Recent Window (Jun 2024–May 2026)

RigaCap	+32.0% annualized · 2.20 Sharpe · 8.5% max DD
S&P 500	+19.9% annualized · 1.18 Sharpe · 19.0% max DD

The behavioral edge: Strategies only compound if investors can hold them. Stress-testing a \$100k investor who panic-sells after a -25% drawdown: RigaCap finishes at **\$473k under every re-entry rule** — it never trips the panic threshold. Raw momentum finishes anywhere from \$206k to \$1.02M depending on nerve (6–10 panic-sales), and the S&P 500 from \$210k to \$399k. RigaCap also runs at just 0.43 monthly correlation to the S&P: averaging -1.0% in months the index falls (vs. -3.9% for the index) and +1.7% when it rises.

How It Works: The Ensemble Approach

RigaCap's production strategy requires **three independent factors** to align before entering a trade, dramatically reducing false signals:

1. Breakout Timing

Price must clear its long-term accumulation zone ($DWAP \times 1.05$) — a proprietary breakout signal refined from 127 legacy stored procedures and 20+ years of data.

2. Momentum Quality

Stock must rank in the top momentum tier via a composite score blending short-term and long-term momentum, penalized for volatility.

3. Breakout Confirmation

Price must sit within 3% of its 50-day high, drawn from a liquid universe (top 100 by 60-day volume, \$15 minimum price, 500k minimum daily volume).

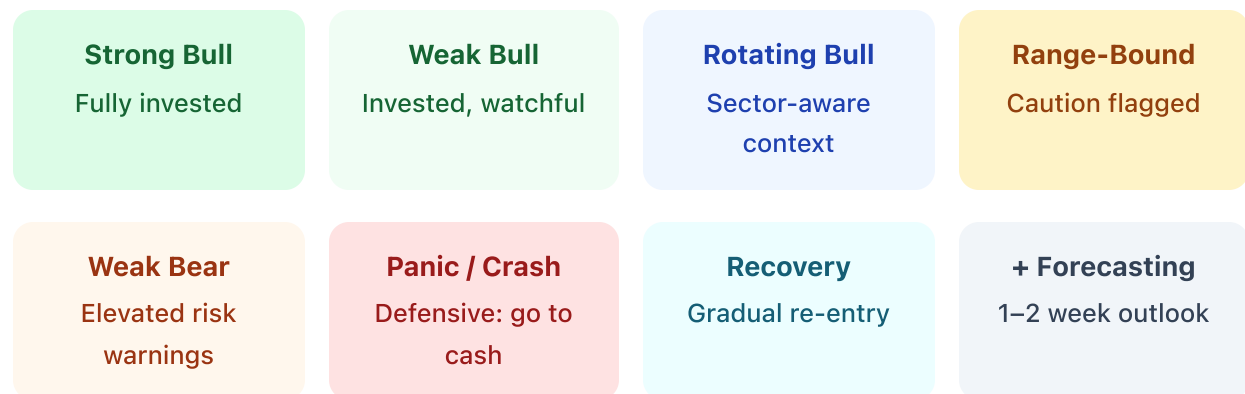

4. Wide Trailing Exit

30% trailing stop from the high water mark — wide enough to let winners run through normal volatility, firm enough to cap any single failure.

Portfolio Construction: Up to 20 positions at 4.5% allocation each, sized by inverse volatility so calmer names carry more weight. Diversification — not concentration — is what keeps the worst drawdown near 19% while raw momentum loses 57%.

Market Regime Intelligence

The core risk lever is the **market-regime filter**: when broad-market conditions break down, the portfolio moves to cash. Behind it, the platform classifies conditions into 7 regimes using a multi-factor model analyzing SPY trend, VIX percentile, market breadth, new highs/lows, and momentum acceleration — powering the dashboard, forecasts, and subscriber context:

The regime detector also provides **transition forecasting** — computing indicator trajectories (VIX delta, breadth acceleration, trend momentum) to predict where the market is heading in the next 1–2 weeks, enabling proactive risk management rather than reactive.

AI & Machine Learning

Parameter Discovery & Validation

RigaCap's parameters were discovered through a **tournament-based approach**: each parameter was tested independently across its full range, isolating which levers actually move returns. This identified that **entry quality** (breakout proximity) is the dominant factor — not stop levels, position sizing, or regime-adaptive adjustments.

Walk-forward testing across 50+ configurations validated that **fixed parameters outperform AI-optimized parameters** by a wide margin. Bayesian optimizers (Optuna TPE) were tested extensively but consistently added noise without improving returns. The final strategy uses a single, robust parameter set across all market conditions.

Binary Regime Response

Rather than adjusting parameters per regime (which was tested and reduced returns), the system uses a binary approach: **invested** (market trend healthy) or **cash** (market trend broken). This simple rule held 2008 to -0.5% while the S&P 500 lost -37.7% , and limited 2022 to -7.5% against the index's -19.9% . It is not free: in whipsaw years like 2018 the filter cost performance (-12.3% vs. -7.0%).

Walk-Forward Validation (Anti-Overfitting)

The system was validated across a continuous 21 years of history (2007–2026) using walk-forward methodology: at each step the system trades forward into unseen data using fixed parameters, producing an **out-of-sample equity curve** — 8.3% annualized with a 19% worst drawdown, entirely on data the system never saw during development. The most recent 24 months (Jun 2024–May 2026) were held out entirely: $+32.0\%$ annualized, 2.20 Sharpe, 8.5% max drawdown. Data from 2016 onward is survivorship-free and point-in-time; the pre-2016 extension carries a survivorship caveat.

Metrics tracked per period: Sharpe, Sortino, Calmar, profit factor, win rate, max consecutive losses, recovery factor, Ulcer index. The system logs every parameter change and strategy switch for full investor transparency.

Social Intelligence Engine NEW

RigaCap's Social Intelligence Engine is an autonomous growth flywheel that no competitor in the retail trading signal space has replicated. It transforms real trade results into social content, distributes that proof into active market conversations, and builds community through intelligent engagement — across Twitter/X, Instagram, Threads, and TikTok. The system operates with near-zero marginal cost per subscriber acquired.

AI Content Generation

Claude generates witty, data-driven posts from real trade data. Each post type (trade result, missed opportunity, "we called it") has tailored prompts for Twitter, Instagram, and Threads.

News-Aware Messaging

Integrates real-time news headlines via market data APIs, connecting profitable exits to breaking news with a "we saw that coming" angle — without hype or financial advice.

Branded Chart Cards

1080×1350 (4:5 ratio) Instagram-ready chart cards with price charts, entry/exit markers, return badges, and gold-accented branding — generated server-side via matplotlib.

Admin Approval Pipeline

24-hour and 1-hour pre-publish notifications with one-click cancel links. JWT-signed email buttons let admins kill posts without logging in.

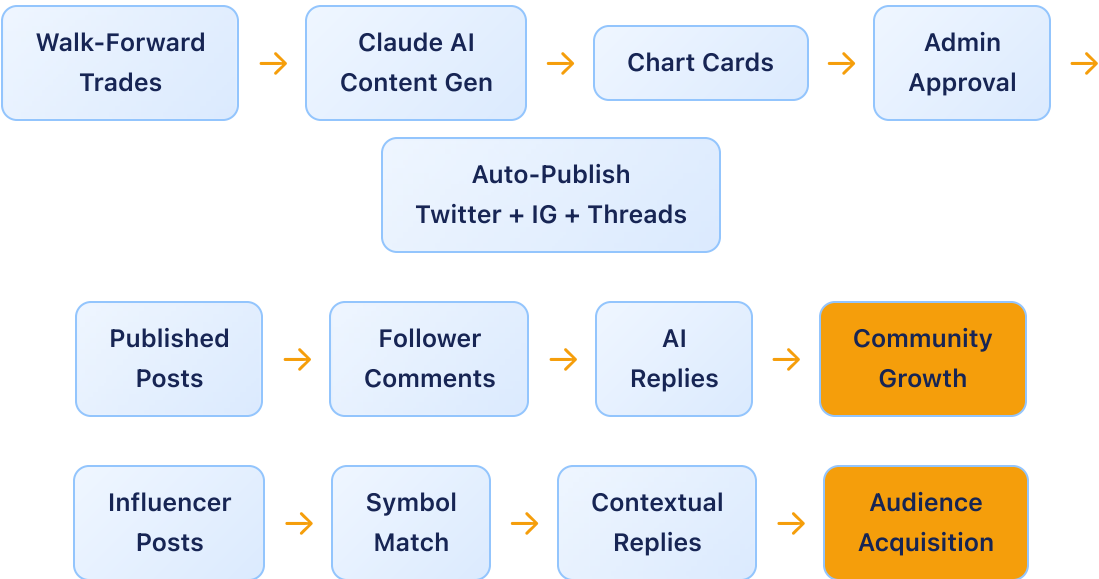

Contextual Reply Engine

Scans 25+ influential fintwit accounts for stock mentions, matches to our proven trades, and generates Claude-powered replies that insert RigaCap into active market conversations. Runs across Twitter/X and Threads.

Community Engagement

AI-powered comment replies on Instagram posts. When followers engage, the system generates warm, on-brand responses that build community and encourage subscription.

Three-Leg Flywheel

Post Types

TYPE	PURPOSE	TIMING
Trade Result	Celebrate a winning trade with entry/exit details and return percentage	1–2 days after exit
Missed Opportunity	FOMO-angle post showing the return non-subscribers missed	2–3 days after exit
"We Called It"	Connects trade result to breaking news — proves the signal anticipated the move	When matching news breaks
Contextual Reply	Responds to influencer posts about stocks we traded — inserts RigaCap into active conversations	Within 4 hours
Comment Reply	Engages with followers commenting on our posts — builds community	Within 4 hours

Signal-to-Social Flywheel: Most trading signal services post screenshots of their best weeks. RigaCap's Social Intelligence Engine automatically generates content from every walk-forward trade, proactively engages in market conversations with proven results, and builds community across three platforms — all AI-powered, all from real data, all admin-approved. More trades → more content → more engagement → more subscribers → more credibility.

Real Example (Jan 2026): SLV delivered +17.3% in 11 days. Our signal fired Jan 5 at \$69.08, exit Jan 16 at \$81.02. The engine connected this to the precious metals rally and generated platform-specific posts for Twitter (186 chars), Instagram (591 chars), and Threads (350 chars) with branded chart cards.

Recent AI-Generated Trade Results (Jan 2026)

SYMBOL	ENTRY	EXIT	RETURN	DAYS
SLV (iShares Silver)	\$69.08	\$81.02	+17.3%	11
MU (Micron Tech)	\$312.15	\$362.75	+16.2%	11
RKT (Rocket Mortgage)	\$21.10	\$23.24	+10.1%	11

Deep Intelligence Suite NEW

Beyond signal generation, RigaCap provides institutional-grade trade intelligence that continuously improves system performance and subscriber confidence.

AI Trade Autopsies

Every closed trade receives a Claude-powered forensic post-mortem analyzing entry timing, exit execution, and market regime impact. Each autopsy includes a verdict, score (1–10), and actionable lesson for system improvement.

Ghost Portfolios

Three parallel universes run alongside our model portfolio with different parameters (aggressive, conservative, top-3 concentrated). We prove in real-time that our chosen configuration outperforms alternatives.

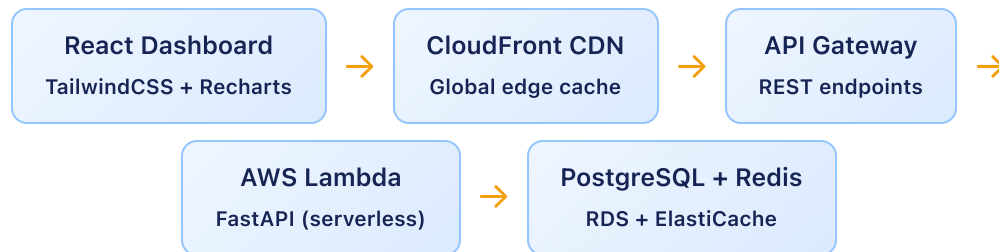

Regime Shift Forecast

Our market-regime intelligence doesn't just detect—it predicts. Daily probability forecasts with historical accuracy tracking give subscribers early warning of market regime shifts.

Personalized Impact Calculator

Every subscriber sees exactly what following our signals would have earned them, calculated from their signup date, compared against the S&P 500. Shareable results drive organic word-of-mouth growth.

Platform Architecture

Data Pipeline

- 4,000+ US equities scanned daily
- 20+ years of historical OHLCV data
- Dual-source: Alpaca (primary) + yfinance (fallback)
- Split/dividend-adjusted prices
- S3-cached universe with 7-day TTL
- 45+ technical indicators per stock
- Pre-computed dashboard JSON on CDN

Operational Cadence

- Daily 4 PM ET: Full market scan
- Daily 5 PM ET: Breakout alert check
- Daily 6 PM ET: Subscriber email digest
- Daily 8 PM ET: Walk-forward + social posts
- Every 15 min: Auto-publish scheduled posts
- Daily: Model portfolio update from fresh signals

Subscriber Experience

Buy Signals

Ensemble-validated picks with momentum rank, breakout strength, and confidence score. Fresh signals marked "BUY NOW" with pulsing indicator.

Market Regime

Current regime classification with color-coded severity, SPY level, VIX reading, and 1–2 week directional forecast.

Portfolio Guidance

Position-level sell signals, trailing stop distances, and regime-based exit recommendations for open positions.

Missed Opportunities

Stocks that triggered signals but weren't purchased, showing the return left on the table — a powerful conversion tool.

Cash

REGIME FILTER
DEFAULT

Downside Protection (backtested): In 2008, the regime filter held the portfolio in cash — finishing the year at -0.5% while the S&P 500 lost -37.7% . In the 2022 bear it limited losses to -7.5% against the index's -19.9% . Across the full 21-year backtest the worst drawdown was 19%, versus 55% for the index and 57% for raw momentum.

Cascade Guard: A portfolio-level circuit breaker pauses all new entries when multiple positions hit their trailing stops on the same day — the signature of cascading market stress — preventing automatic re-entry into a falling market.

Growth Engine & Roadmap

RigaCap now sells into **two channels**. The retail channel grows through social proof, automated content, and conversion-optimized funnels at \$129/month per subscriber. The second channel — opened June 2026 with a dedicated adviser product surface — is **registered investment advisers**, who license the strategy at the firm level for internal use across client accounts.

The adviser channel changes the unit economics: a firm license is priced at a multiple of a retail seat, is applied across millions in client AUM (making the fee trivial relative to delivered value), is acquired through a single conversation rather than a paid funnel, and carries near-zero marginal cost. The product is unusually well-shaped for this buyer — an adviser's core business risk is the client who capitulates at the bottom, and RigaCap's pitch is exactly that risk, quantified: a 19% worst drawdown across twenty-one backtested years versus 55–57% for the index and raw momentum, 0.43 monthly correlation to the S&P, and a sit-out-the-crash record through the index's worst months. RigaCap remains a publisher throughout: impersonal signals, the adviser retains all discretion and fiduciary duty, no custody, no client data.

Current Capabilities (Launched)

155+ API ENDPOINTS	23 DATABASE TABLES	28+ BACKEND SERVICES
--	--	--

Revenue Model

PLAN	PRICE	FEATURES
Monthly	\$39/month	Daily signals, email alerts, portfolio guidance, market regime
Annual	\$349/year	Same features, 3 months free (save \$119)
Trial	7 days free	Full access, credit card required (Stripe-managed)

Roadmap to 5,000 Subscribers

● **Phase 1: Social Intelligence Engine (Live)**

AI-generated social content from real trades across Twitter/X, Instagram, Threads, and TikTok. Contextual reply engine scans influencer accounts. Instagram comment auto-replies build community. All admin-approved.

● **Phase 2: Organic Growth**

Public track record page, referral program ("give a month, get a month"), onboarding email drip (5-7 day sequence)

● **Phase 3: Retention & Engagement**

User performance dashboard (personal ROI tracking), cancel survey + win-back emails, usage-based retention alerts

● **Phase 4: Scale**

SEO/content strategy (blog, market commentary), paid acquisition (Google Ads, social ads), institutional tier

Authentication & Security

User Authentication

- Google OAuth + Apple Sign In
- Email/password with bcrypt hashing
- JWT tokens (15-min access, 7-day refresh)
- Cloudflare Turnstile bot protection
- Secure password reset via email

Infrastructure Security

- CORS whitelist (rigacap.com only)
- Private S3 buckets (no public signal data)
- Admin-only routes with email allowlist
- HTTPS everywhere (ACM certificates)
- Stripe-managed payment security (PCI DSS)

Adaptive AI Trading Platform — rigacap.com

This document is confidential and intended solely for the recipient. Past performance does not guarantee future results. Trading involves risk of loss. Walk-forward results are out-of-sample but simulated — not live trading results. The live track record began June 11, 2026 with a fresh \$100k model book; all

performance before that date is backtested. Backtest data from 2016 onward is survivorship-free and point-in-time; pre-2016 data carries a survivorship caveat.

RigaCap provides trading signals only — users execute trades via their own brokerage accounts.
